Project **SR-FA11 / K Reactor Deactivation Project**

General Project Information

Project Description Narratives

Purpose, Scope, and Technical Approach:

Definition of Scope: Deactivation of K Area will involve:

1. Collection, packaging, and storing unknown volume of scrap from the disassembly basin;
2. Collection, stabilizing, packaging, and storing of an estimated 5000 cubic feet of sludge from the disassembly basin;
3. Deionization and evaporation of 3.6 million gallons of water from the disassembly basin;
4. Deionization and evaporation of water from the 106 and 109 collection sumps (maximum combined capacity of 65,000 gallons);
5. Grouting of the 106 and 109 collection sumps with a combined volume of 12,850 cubic feet;
6. Draining and collection of up to 1800 gallons of contaminated heavy water and contaminated light water from small piping;
7. Preparation and implementation of facility characterization and deactivation plans; and,
8. Preparation and implementation of a facility long term surveillance and maintenance plan.

Technical Approach: Deactivation of K Area can be accomplished with existing technology, although new technologies may reduce the cost and shorten the schedule for deactivation. The following describes the technical approach for K Area deactivation:

a. Disposal of scrap: Disassembly basin equipment and scrap will be placed in containers and stored in a solid waste repository.
b. Disposal of sludge: Basin sludge will be collected by underwater vacuuming, and free water will be removed or fixed. Similar methods have been successfully demonstrated in the past during the partial sludge removal efforts at L Reactor. Deposits removed from walls by water blasting during basin water removal will also be collected. The sludge will be placed in containers and stored in a solid waste repository.
c. Disposal of water from disassembly basin and the 106 and 109 collection sumps: Water will be passed through deionizers to remove radioactive ions and will be evaporated.
d. Grouting of the 106 and 109 collection sumps: The sumps will be filled with grout in a process already demonstrated on several SRS waste storage tanks.
e. Draining of small piping: Pipes will be drained by cutting, drilling, and disassembly. Collected water will be stored as processing facilities are no longer available.

Project Status in FY 2006:

Site funding limitations currently preclude funding for the larger deactivation projects that would be needed to significantly reduce K Area surveillance and maintenance costs. Current funding guidance indicates that K Area will operate until FY2013. Consequently, the large scale deactivation scope outlined in this PBS will not begin until then. This does not preclude, however, the planning and implementation of smaller scale projects encompassing a portion of the scope for this ACP project. These projects would be initiated to reduce a specific risk, thereby lowering surveillance and maintenance costs associated with that particular risk. Funding for this type of project would be incremental to the K Area surveillance and maintenance budget. As funding for these small scale projects is speculative, no consideration is given to them in this PBS.

Post-2006 Project Scope:

Project Baseline Summary Report

Operations/Field Office: **Savannah River**

Print Date: **3/9/2000**

Site Summary Level: **Savannah River Site**

HQ ID: **0508**

Project **SR-FA11 / K Reactor Deactivation Project**

Project Description Narratives

The post-FY06 work scope is essentially the entire deactivation project work scope. SNF programmatic guidance indicates that K Area operations will cease in FY2013. Current funding guidance indicates that the large scale deactivation scope outlined in this PBS will begin after FY2013, followed by deactivation completion in FY2020. At such time, a routine of quarterly entries will be established. These entries will verify the structural integrity of K Area facilities, and verify the operational integrity of remote monitoring equipment, sump pumping equipment, and environmental monitoring equipment required by the surveillance and maintenance plan. This quarterly monitoring will continue until final disposition of the facilities.

Project End State

This project provides for the deactivation of K Area only. Additional projects will be required to meet the EM site end state. Contamination in K Area is expected to be consolidated within the confines of the 105-K Reactor building. Deactivation of the disassembly basin and the 106 and 109 collection sumps is expected to reduce or eliminate groundwater monitoring in K Area. At this time, an end state for the facilities in K Area have not been defined. Reuse of facilities has been considered in the past. However, no plans have been made at this time to reuse K Area facilities after deactivation (post-FY2020).

No nuclear materials, spent fuel, or high level waste will be stored in K Area at project initiation, nor will any be generated by this project. Primary wastes generated by this project will be contaminated water and sludge from the disassembly basin, most likely categorized in both cases as low level waste or mixed waste. Specific treatment methodologies for these wastes will depend on characterization, which has not been performed at this time.

Cost Baseline Comments:

Costs identified in this PBS are rough order of magnitude engineering estimates only. Some historical data for a few activities, such as sludge vacuuming, was used for these estimates. Work scope identified in this PBS is based on process and facility history only, not from detailed characterization of facility hazards. Such characterization efforts will likely alter the scope and cost of this project.

Safety & Health Hazards:

As the project will not be funded until after FY06, no safety and hazards analysis has been performed for K Area deactivation activities. Such analyses will be performed in accordance with Site standards. The criteria for determining the radiological hazard categories are provided in DOE-STD-1027-92 , and the criteria for determining the chemical hazard categorization are provided in WSRC-MS-92-206.

Safety & Health Work Performance:

Activities and check points are described by the Integrated Management System Description. The conditions and requirements are clearly established and agreed upon prior to the starting of any project and those requirements are contractually binding upon WSRC. The key elements of the WSRC Integrated Safety Program are to define the scope of work, identify and analyze hazards associated with the work, develop and implement hazard controls, perform work within controls, and provide feedback on adequacy of controls and continue to improve safety management. The WSRC Integrated Procedures Management System is the primary mechanism for implementing the objective, principles and functions of the Safety Management System. This system establishes Company-Level, Division-level, and Program-specific procedures consistent with organizational roles, and ensures a consistent, discipline site-wide approach to safety while performing work.

Site Need Code: SR99-4007

Site Need Name: Characterization of Volumetrically Contaminated Surfaces

Focus Area Work Package ID: DD-10 **Focus Area Work Package:** Production Reactor D&D

Focus Area: DDFA **Agree with Technology Link:** N

Benefits (Cost, Risk Reduction, Both): Cost

Technologies	Cost Savings (in thousands of dollars)	Range of Estimate
Portable X-Ray, K-Edge Heavy Metal Detector		
Portable X-Ray, K-Edge Heavy Metal Detector		
Portable X-Ray, K-Edge Heavy Metal Detector		
Portable X-Ray, K-Edge Heavy Metal Detector		
Remote Concrete Coring		
Remote Concrete Coring		
Remote Concrete Coring		
Remote Concrete Coring		

Project Baseline Summary Report

Data Source: **EM CDB** Report Number: **GEN-01b**

Operations/Field Office: **Savannah River** Print Date: **3/9/2000**

Site Summary Level: **Savannah River Site** HQ ID: **0508**

Project **SR-FA11 / K Reactor Deactivation Project**

Technology Needs

Site Need Code: SR99-4008

Site Need Name: Dismantlement of Concrete-Encased Piping

Focus Area Work Package ID: DD-11

Focus Area Work Package: Deactivation of 321-M Fuel Fabrication Facility

Focus Area: DDFA

Agree with Technology Link: N

Benefits (Cost, Risk Reduction, Both): Cost

Technologies	Cost Savings (in thousands of dollars)	Range of Estimate
Oxy-Gasoline Torch		
Oxy-Gasoline Torch		
Oxy-Gasoline Torch		
Remote Control Concrete Demolition System		
Remote Control Concrete Demolition System		
Remote Control Concrete Demolition System		
Liquid-Nitrogen Cooled Diamond-Wire Concrete Cutting		
Liquid-Nitrogen Cooled Diamond-Wire Concrete Cutting		
Liquid-Nitrogen Cooled Diamond-Wire Concrete Cutting		
Track Mounted Shear/Crusher		
Track Mounted Shear/Crusher		
Track Mounted Shear/Crusher
